

Patient Encounter Logs

The log is one form of evaluation in the Psychiatry Clerkship used to assess expected knowledge and skills. Medical students complete their logs to assess their exposure to psychiatry diagnoses and procedures. **For each patient a student can log up to 2 separate diagnoses or procedures as applicable.**

Diagnosis/Disorder	Minimum Requirements	Procedures/Treatment	Minimum Requirements
Anxiety Disorder (i.e. panic disorder, generalized anxiety disorder, PTSD)	3	First Generation Antipsychotics	2
Neurocognitive Disorders (i.e., dementia, delirium)	2	Second Generation Antipsychotics	6

Mood Disorders (i.e., adjustment disorder with depressed mood, major depressive disorder, bipolar disorder, mood disorder secondary to general medical condition)	3	Anxiolytics	6
Substance Use Disorders (i.e., alcohol, opioid, benzodiazepine, cocaine abuse or dependence)	2	Mood Stabilizers	6
Personality Disorder (i.e. borderline)	2	Cognitive Behavioral Therapy*	1
		Supportive Therapy+	4
		Electroconvulsive Therapy*	1

***May be met by viewing the online video.**

+A non-confrontational therapy used to support the patient's functioning and coping strategies. It is best suited for a patient with a high level of functioning who is currently overwhelmed but may be used to strengthen functioning for a patient with limited abilities needing supportive direction. The therapist establishes a reality-based working relationship and may provide reinforcement for positive behaviors, make suggestions on topics such as limit setting or environmental changes, offer genuine reassurance, as well as encouragement to deal with stressful situations. The patient may receive praise and encouragement to use coping strategies that reduce stress and manage conflict.
